

Penicillamine

Shared Care Guideline

Specialist details	Patient identifier		
Name:			
Location:			
Tel:	Date:		

Introduction

Licensed indications include: severe active rheumatoid arthritis (including juvenile forms).

Adult dosage and administration

Rheumatoid Arthritis: 125 to 250mg daily for the first month. Increase by the same amount every four to twelve weeks until remission occurs. The minimum maintenance dose to achieve suppression of symptoms should be used and treatment should be discontinued if no benefit is obtained within twelve months. Improvement may not occur for some months.

The usual maintenance dose is 500 to 750mg daily. Up to 1500mg daily may be required.

Available as 125mg and 250mg tablets.

Hospital specialist responsibilities

- Assess if the patient is suitable for treatment with penicillamine.
- Agree shared care with patient's GP.
- Varicella Zoster immune status: if non-immune, consider immunisation prior to starting treatment.
- Advise GP on dose of penicillamine to be prescribed.
- Provide patient/carer with relevant written information on use, side effects and the need for monitoring of medication.
- Undertake baseline tests as indicated in monitoring table.
- Review results of safety monitoring and request additional tests as required.
- Monitor disease response to treatment and need to continue therapy.
- Continue to review the patient at agreed specified intervals, sending a written summary to the GP whenever the
 patient is reviewed.
- Provide any other advice or information for the GP if required.

Monitoring table Hospital specialist GP			Hospital specialist			
	Indication	Pre- treatment baseline	During treatment			
Test			Until dose stable for 6 weeks	Thereafter	Only where indicated by specialist **	At review
FBC	Baseline assessment, dose adjustment	· ·	Every 2 weeks	Every month	Every 3 months **	As part of
LFTs						
U&Es, eGFR						
Urinalysis	To assess for renal disease (haematuria or proteinuria) or infection	·	Lvery 2 weeks	Lvery month	Every 5 months	review or as clinically indicated
ESR/CRP	Disease Activity Scoring	✓	Every 3 months			
Height & weight	Baseline assessment	✓	Not routinely required			If clinically indicated
Blood pressure		If clinically indicated				
Chest x-ray	Baseline assessment,					
PFTs, TB screening if indicated	respiratory and TB screening					
Ask about oral ulceration, sore throat, unexplained rash or unusual bruising/bleeding ✓		√	At every consultation			✓

If a further DMARD/JAK is added as combination therapy, or the dose is increased, the initial starting schedule should be reinstated. There may be clinical circumstances where the frequency of monitoring may vary and this should be specified by the initiating specialist ** Patients who have been stable for 12 months can be considered for reduced frequency monitoring on an individual patient basis as recommended by specialist at review or by specialist communication

GP responsibilities

- Prescribe penicillamine.
- Arrange and record ongoing monitoring as advised by specialist (see monitoring table), ensuring practice systems are in place to recall patients for monitoring blood tests.
- Follow-up any non-compliance with the monitoring schedule. The risks of cessation of therapy versus risks of toxicity should be considered. Contact the specialist if treatment is stopped or further advice required.
- Report any adverse drug reactions to initiating specialist and the usual bodies (eg. MHRA/CHM).
- Ensure no drug interactions with other medicines.
- Administer inactivated influenza vaccine annually unless otherwise advised by the initiating specialist.
- Check patient has had ONE DOSE of pneumococcal vaccine (revaccination is not recommended except every five
 years in patients whose antibody levels are likely to have declined more rapidly eg. asplenia), see BNF or Green
 Book.
- Provide COVID 19 and inactivated shingles (Shingrix®) vaccination as appropriate as per local arrangements and Green Book
- Post exposure prophylaxis (antivirals or VZIG if antivirals are contraindicated) should be considered in non-immune
 at risk patients if exposed to chickenpox or shingles. Contact the consultant virologists, Regional Virus Laboratory,
 Royal Group of Hospitals on 07889 086 946 for advice if exposure is suspected. For other queries eg. those
 concerning exposure, infection or any recommendations relating to healthy susceptible household contacts, consult
 the Green Book and/or take additional advice from Regional Virus Laboratory, Royal Group of Hospitals
- Ask about unexplained rash, oral ulceration, sore throat or unusual bruising/bleeding at every consultation.

Penicillamine SCG June 2023 Page 2 of 3

Withhold penicillamine and contact specialist if:

- WCC < 3.5 x 10⁹/L
- Neutrophils < 1.6 x 10⁹/L
- Unexplained eosinophilia > 0.5 x 10⁹/L
- Platelets < 120 x 10⁹/L
- **Urinalysis:** if proteinuria ++ or more, check MSSU: if infection present, treat appropriately. If no infection present, withhold penicillamine, check urine protein/creatinine ratio and discuss with specialist team.
- MCV > 105fL, (check B12 & folate & TFT)
- AST / ALT > 3 times the upper limit of normal (for results between 2 3 x ULN, continue penicillamine, repeat bloods and seek specialist advice). Minor elevations of AST/ALT are common
- If renal impairment develops (not always appropriate to stop but may need dose adjustment)
- Unexplained fall in serum albumin
- · Oral ulceration / sore throat
- Unexplained rash / abnormal bruising.

Normal reference range may vary slightly between labs.

Please note an unusual fall or rise or a consistent downward or upward trend in any value should prompt review of the patient and extra vigilance. Some patients may have abnormal baseline values, specialist will advise.

Adverse effects, precautions and contraindications

Proteinuria. Transient mild proteinuria is common (see urinalysis in Table above).

Haematuria is rare, but if it occurs in the absence of renal stones or other known causes, seek advice from the specialist.

Blood disorders: thrombocytopenia, neutropenia, agranulocytosis, aplastic anaemia, haemolytic anaemia, leucopenia. GPs should be alert to any unexplained bruising or bleeding.

Nausea, anorexia, fever and rash may occur early in therapy especially when full doses are given from the start. Antihistamines, steroid cover or temporary reduction of dose will control urticarial reactions. Anti-emetics may also be required.

Loss / alteration of taste can occur but occasionally settles spontaneously.

Stomatitis: if persistent or severe refer to specialist.

Pyridoxine daily may be given to patients on long term therapy (if specialist advises), especially if they are on a restricted diet, since penicillamine increases the requirement for this vitamin.

Pregnancy. Penicillamine should not be administered to patients who are pregnant and therapy should be stopped when pregnancy is confirmed or suspected, unless considered absolutely essential by the specialist.

Breastfeeding. Women being treated with penicillamine should seek specialist advice.

Contraindications include:

- Systemic lupus erythematosus
- Moderate or severe renal impairment.

NOTE: allergy to penicillin is NOT a contraindication to penicillamine therapy.

Common drug interactions

Antacids decrease absorption of penicillamine (do not give within 2 hours).

Clozapine: penicillamine may potentiate the blood dyscrasias seen with clozapine.

Digoxin: digoxin levels can be reduced by concurrent use of penicillamine (do not give within 2 hours).

NSAIDs and other nephrotoxic medicines: combinations with increased risk for nephrotoxicity: eg. NSAIDs & aspirin (<300mg) can be prescribed concomitantly on specialist advice. Additional monitoring may be required.

Iron: decreases absorption of penicillamine (do not give within 2 hours).

Zinc: decreases absorption of penicillamine.

Communication

For any queries relating to this patient's treatment with penicillamine, please contact the specialist named at the top of this document.

This information is not inclusive of all prescribing information and potential adverse effects. Please refer to full prescribing data in the SPC at www.medicines.org.uk or the BNF
